01

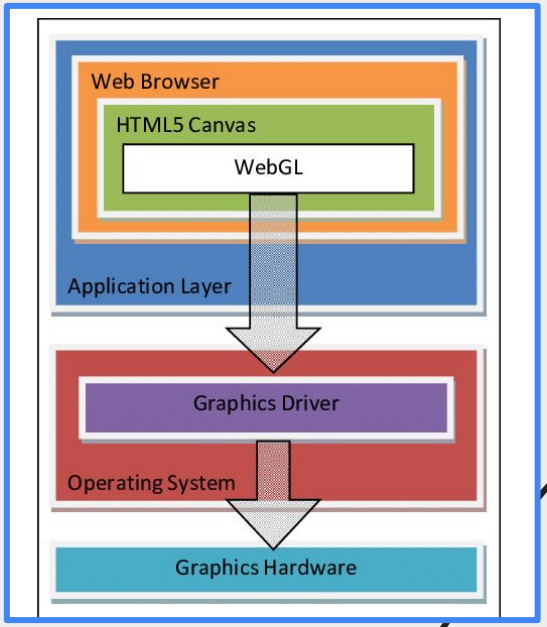
Introduction

What ‘s WebGL?

Introduction

What ’s WebGL?

- JavaScript API
- 2D and 3D graphics on canvas
- Uses user GPU
- It is a useful tool for frontend



Introduction

Why we should learn something about WebGL?

- You can create amazings experiences that would be impossible with JS and CSS.
- WebGL benefits from being designed at a low level, very close to the GPU.

02

Motivation

What could you do?

03

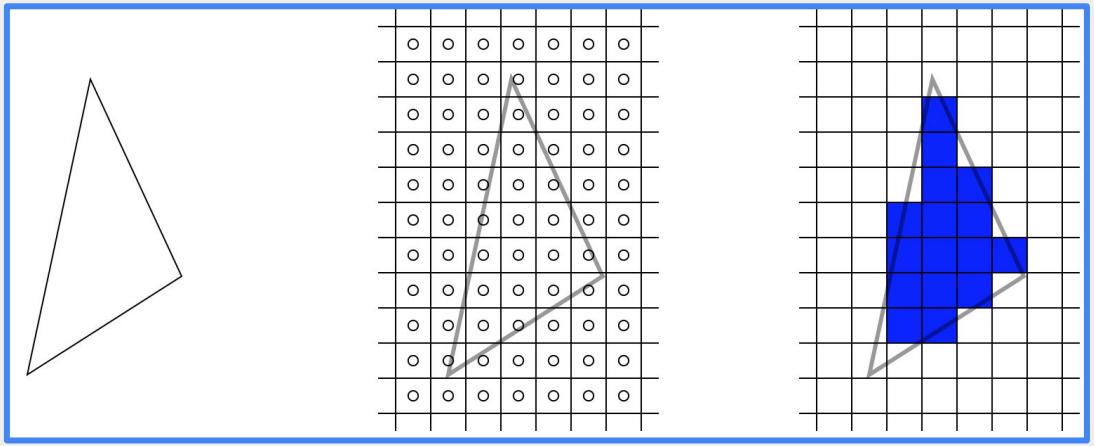
Basic concepts

What we need to learn before coding?

Vertex Shaders

Rasterization:

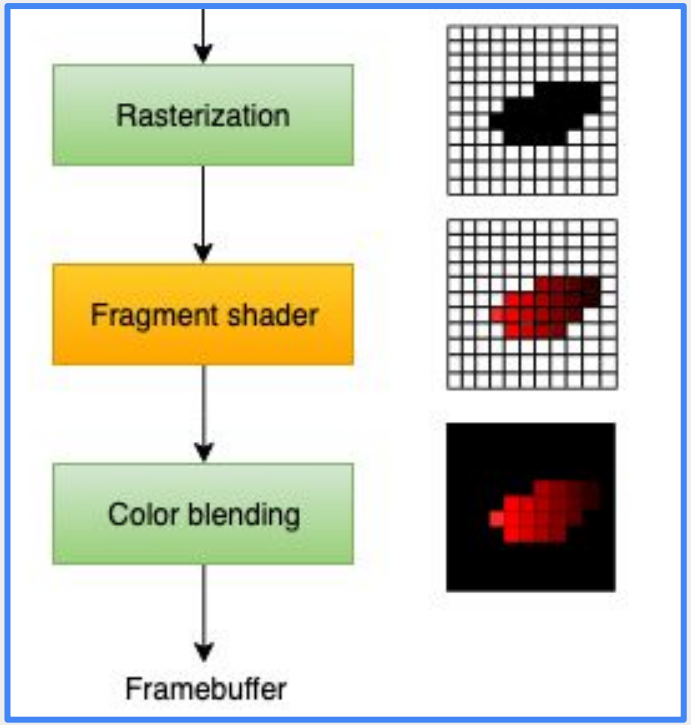
Turn vertices into pixels.



Fragment Shaders

Colors each pixel individually.

Then returns the image to the framebuffer to be displayed.



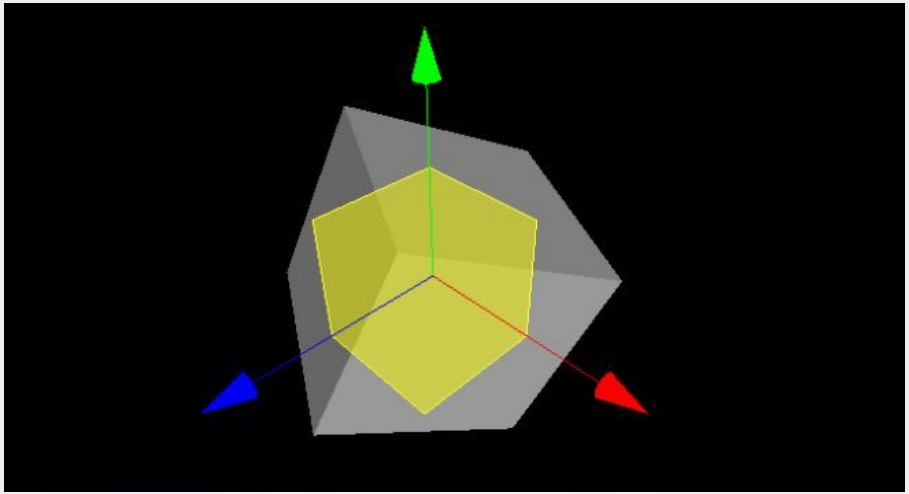
Buffers

What is a "buffer" in WebGl?

- Types:
  - VertexBuffer: vertex of a 3D Object.
  - IndexBuffer: vertex that form a triangle of a 3D Object.
  - TextureBuffer: texture of 3D Objects.
  - FrameBuffer: render textures.
- Sintaxis:
  - bindBuffer()
  - bufferData()

Matrix Operations

- Manipulating 3D objects
- Displaying 3D elements in a 2 plane (a screen)
- We will be using a library for matrix operations



04

Tutorial

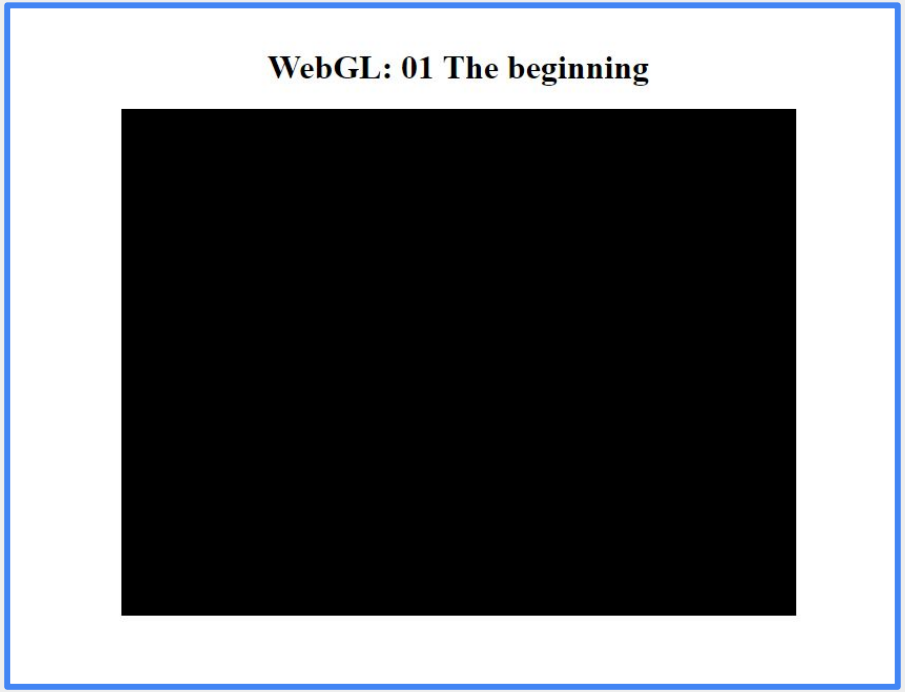
First steps

01 The beginning

Elementos esenciales:

https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/01-the-beginning

01 The beginning

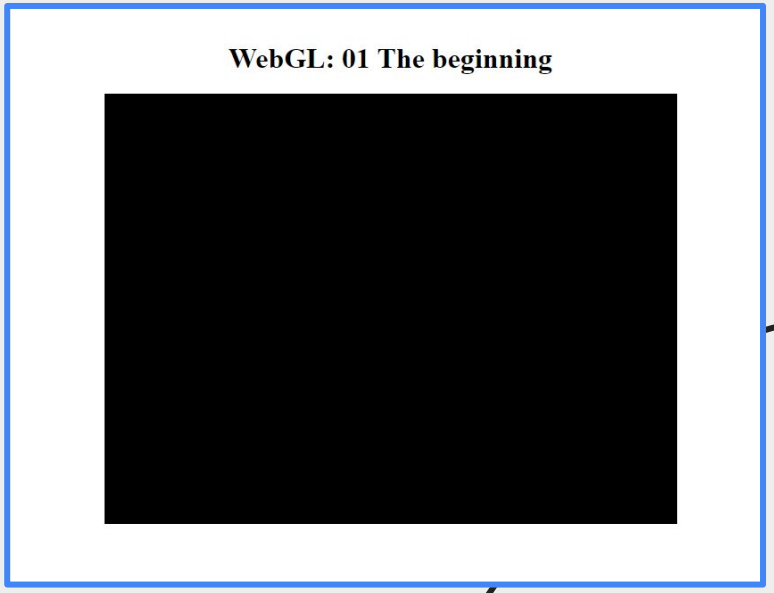


https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/01-the-beginning

01 The beginning

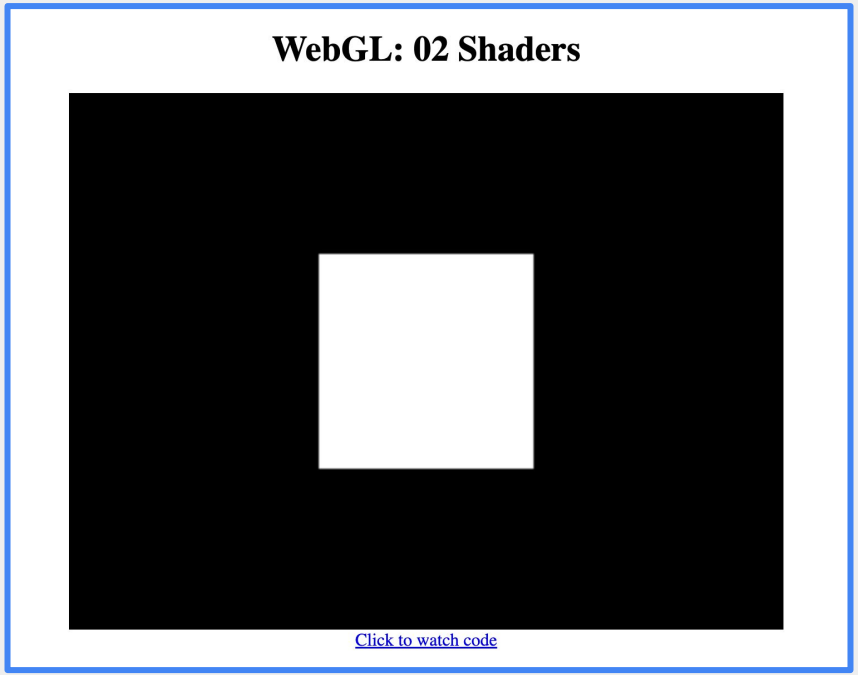
- Create HTML file
- Use a canvas element

- Get WebGL context
- Change color using clearColor()



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/01-the-beginning

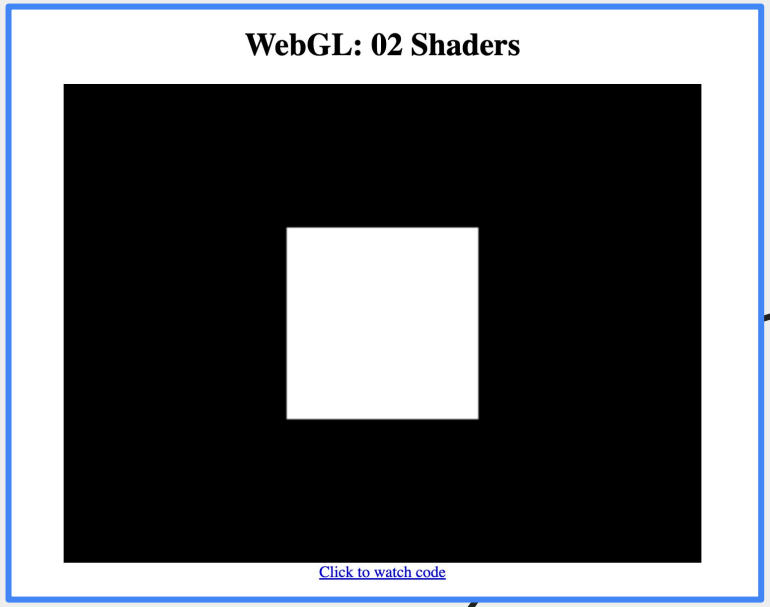
02 Adding 2D elements



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/02_2D_content

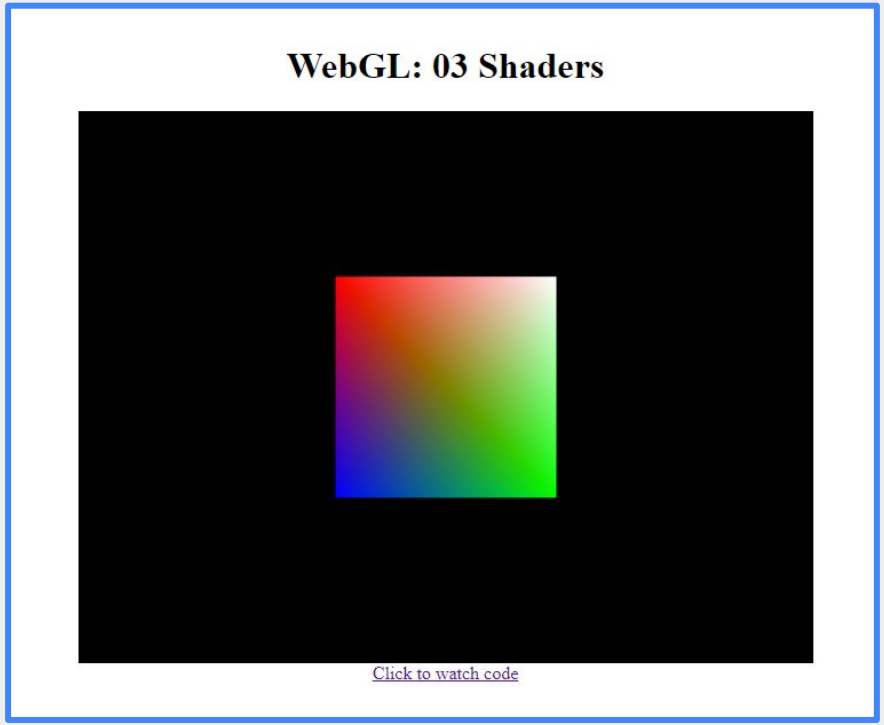
02 Adding 2D elements

- Define shaders
- Create a buffer to store the vertices
- Set the camera



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/02_2D_content

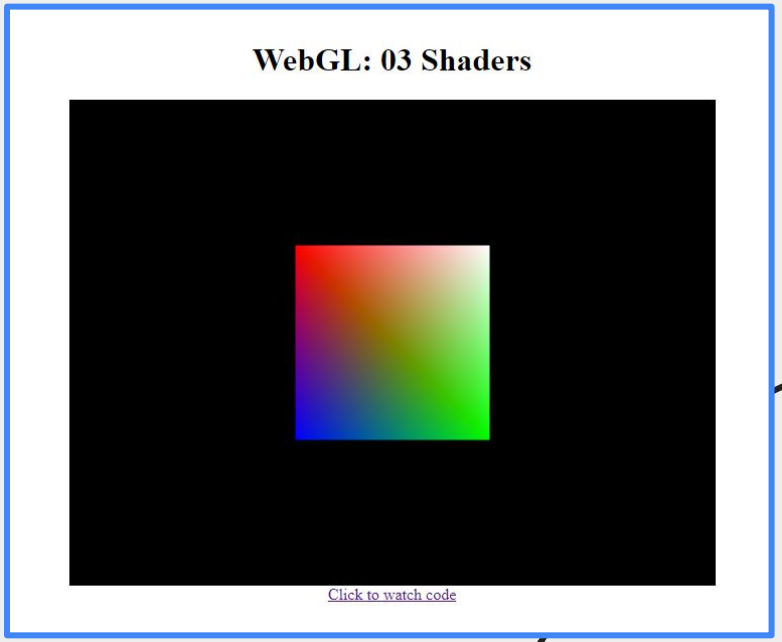
03 Shaders



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/03-shaders

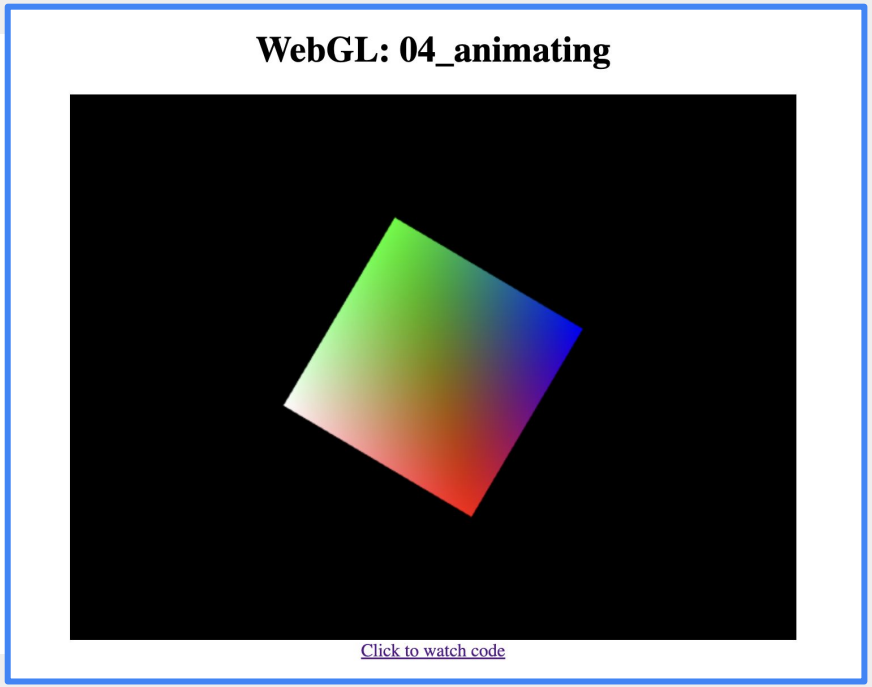
03 Shaders

- Code of 02 2D content
- Define a new buffer (colorBuffer)
- Use varaying variable
- Initialize a color attribute



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/03-shaders

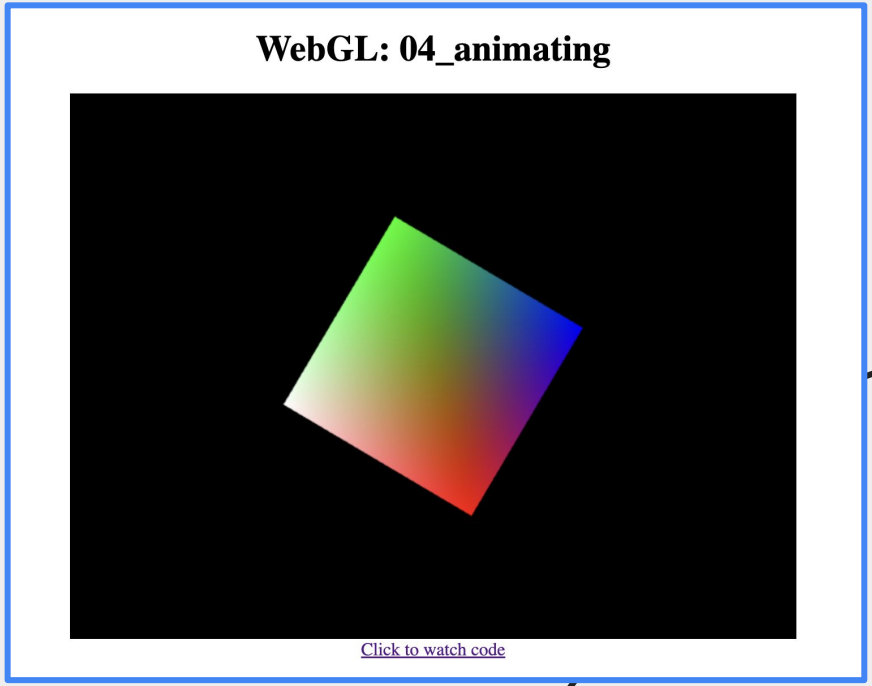
04 Animating



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/04_animating

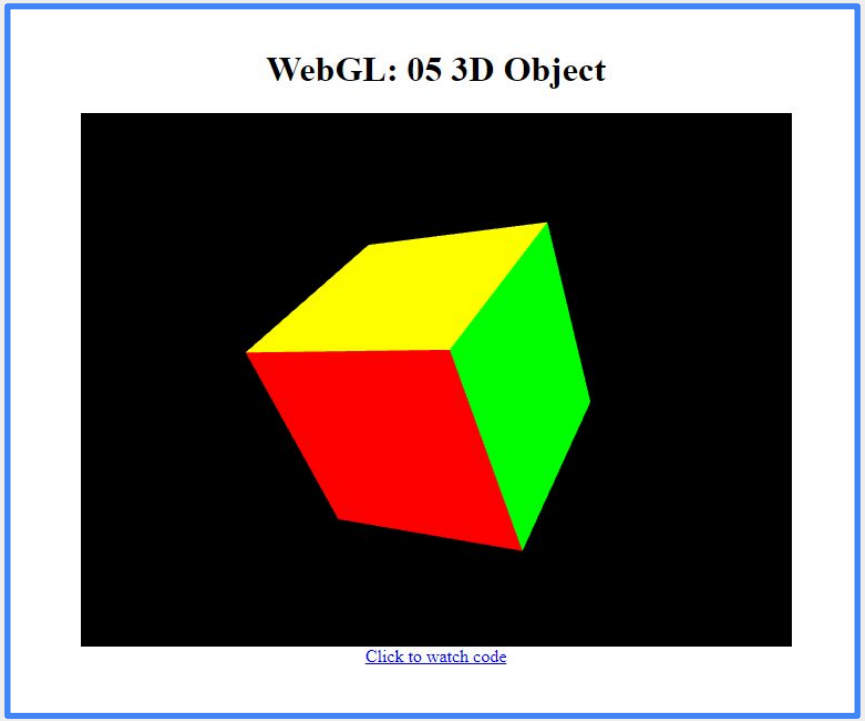
04 Animating

- Change the position of the camera every frame
- Start an animation loop



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/04_animating

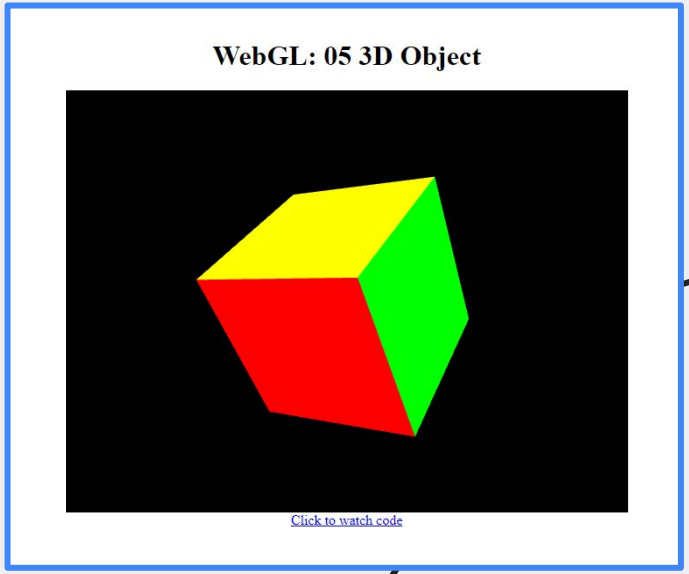
05 3D objects



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/05-3D-objects

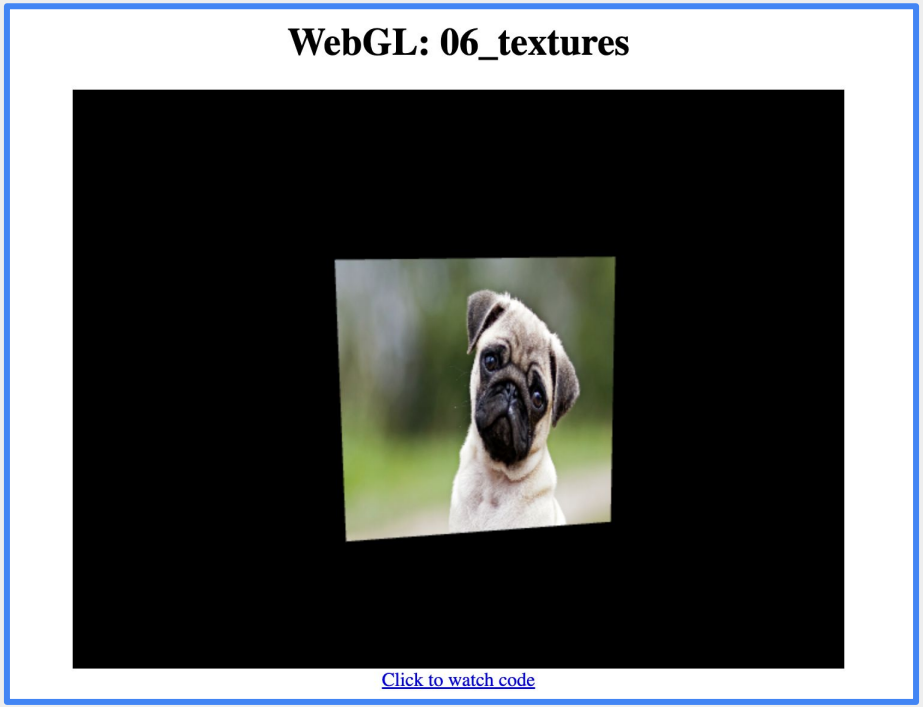
05 3D objects

- Code of 04 Animating
- Define vertex position
- Create a new positionBuffer
- Define vertex colors
- Create a new colorBuffer
- Define vertexs indexs
- Use gl.drawElements() instead of drawArrays()



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/05-3D-objects

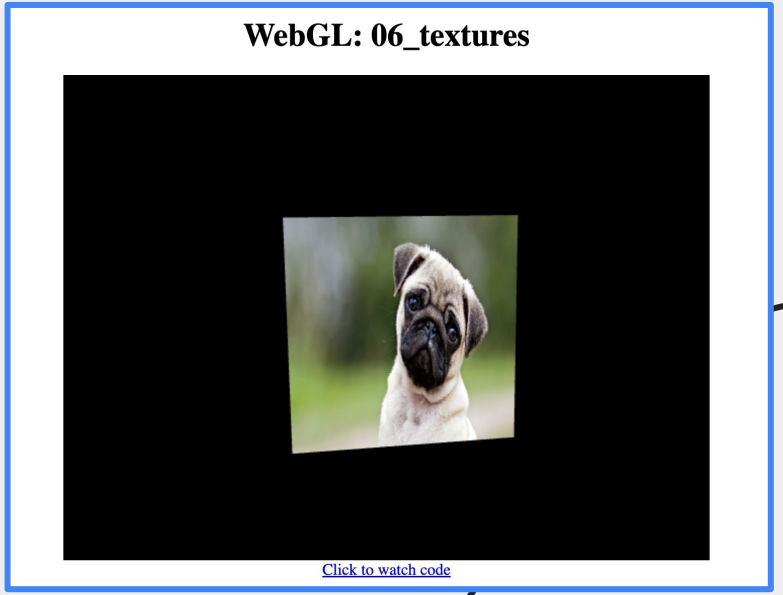
06 Textures



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/06_textures

06 Textures

- Load the texture image
- Map the image to the proper coordinates in a buffer
- Update the shaders
- Add the texture while drawing the cube



https://github.com/ULL-ESIT-PAI-2023-2024/2023-2024-pai-webgl-jaime-martin-adrian-suarez/tree/master/src/06_textures

05

Conclusion

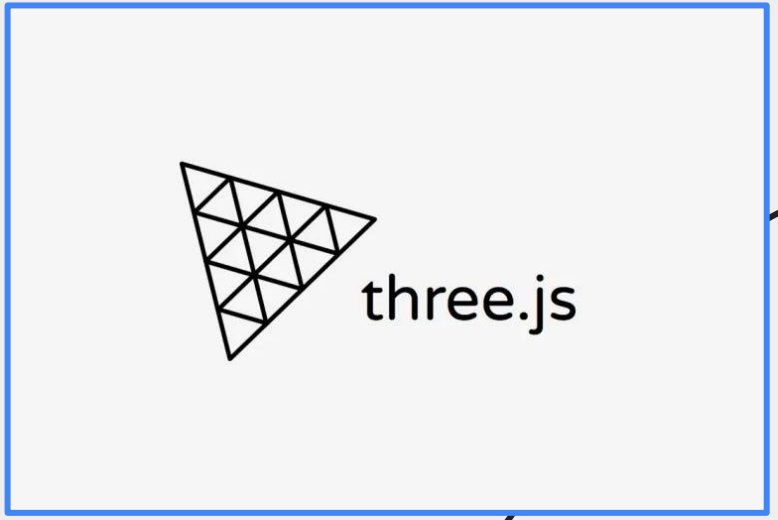
Is it really easy and useful?

Conclusion

- Significant relevance in modern web development.
- Hard to learn.
- Very low level

Libraries:

- Three.js
- stack.gl
- PixiJs



“A journey of a thousand miles begins with a single step”

—Lao Tzu (philosopher)
